

Results-driven software engineer with ten years of experience in full stack software development and backend solutions engineering. Proven ability to optimize system performance and exemplify clean, concise, measurable value-driven strategies.

KNOWLEDGE & SKILLS

Technical Proficiencies

C#/.Net/Entity Framework (and Core)	JavaScript	Terraform
Java	Spring	Hibernate
Groovy	Angular	SQL
AWS (ECS, EC2, S3, Lambda, SAM)	Kafka	

Best Practices/Methodologies

Agile/SCRUM	Waterfall	Event-Driven Architecture
Vertical Slicing	RESTful APIs	TDD/DDD

LIMINALARC— 08/2025 - 04/2026

Consumers Energy, Worker Authentication (09/2025 to 04/2026)

- Senior Software Engineer
 - Architected and delivered a .NET-based service request and work assignment notification platform, enabling real-time tracking and reliable event-driven workflows across distributed systems.
 - Utilized Azure DevOps (ADO) for backlog management, pull request governance, and CI/CD pipelines to ensure traceable, high-quality releases.
 - Mentored junior engineers through mobbing/ensemble programming, improving code quality, shared ownership, and delivery consistency.

DAUGHERTY BUSINESS SOLUTIONS/CGI— 01/2023 - 04/2025

CareMetX, Benefits Verification (06/2024 to 04/2025)

- Senior Software Engineer
 - Recognized improper parsing of EDI files, resulting in an **additional \$10,000 in monthly revenue**.
 - In-house Java rule engine stripped segments indicating active Medicare Supplement plans were active, wrote to DB as Java mutated array with Plan letter's index explicitly modified
 - Records were read from the database from query resulting from Hibernate Criteria API
 - Off-by-1 error caused Plan letter to be truncated, leading to business application logic invalidating Med Supp plans that should have been valid

- Optimized LINQ expressions to **improve page response time by 66%**, boosting user productivity.
- Eliminated several instances of premature .ToList() calls resulting in multiple enumerations of a single data set
- Precompiled performance-intensive SQL-generating LINQ functions
- Refactored LINQ expressions to generate SQL queries without broad wildcard string sequences
- Developed greenfield Coverage Eligibility Request ETL workflow in C#, resulting in **10% increase in automated Benefits Verification.**
- Stood up AWS API Gateway, Kafka producer and consumer groups, S3 buckets for PDF storage, with terraform
- Developed unit tests using MachineSpec for C# in a TDD environment
- Developed REST APIs in Java to publish incoming legacy SOAP requests to Kafka topic
- Developed C# services to consume SOAP messages, map data to FHIR responses, and produce to public Kafka topic
- **Tech Stack: C#, .Net, Entity Framework, Java, Hibernate, SQL, Terraform, Kafka, AWS (EC2, Lambda, S3), EDI, FHIR**

CareMetX, Data Egress & Transformation (06/2023 to 04/2024)

- Senior Software Engineer
 - Established **foundational pattern and organization's first cloud venture** to transform incoming data into outgoing Benefit Verifications and Prior Authorizations
 - Implemented state machine (Stateless, C#) to better manage prescription and enrollment status changes and transform data into Benefit Verifications and Prior Auths (AutoMapper)
 - Stood up AWS Lambda and Kafka topics and producer groups with terraform
 - Lambda triggered off status changes, mapped to FHIR using jsonata, published to Kafka topics
 - Identified solution to work-stopping timeout, leading to **80% faster load times** on common pages
 - Refactored legacy expressions to use lazy loading in Hibernate
 - Created Oracle view to manage complex data sets derived from multiple database transactions
 - **Mentored junior developer** in the art of Git (bash) and LINQ-to-SQL best practices
- **Tech Stack: C#, .Net, Entity Framework/EFCore, SQL, Terraform, Kafka, AWS, Jenkins, CircleCI**

Cigna, Pharmacy Technology/AutoFill Modernization (01/2023 to 05/2023)

- Senior Software Engineer

- **Co-led end-to-end testing effort** for 8 weeks, resulting in a **30% smaller backlog, 200+ bugs fixed**, and extensive documentation on medication filling processes.

KUNZ, LEIGH, & ASSOCIATES – 09/2017 – 01/2023

Michigan Department of Agriculture & Rural Development (MDARD) (10/2019 – 01/2023)

- **Full Stack Software Developer**
 - Set foundation for dependency injection and simplified unit testing by creating Angular providers and component injectors (both root and modular scope)
 - Wrote Storybook application using for rapid UI prototyping by Business Analysts
 - Integrated proprietary Angular Material library to develop base templates
 - Wrote custom service worker to enable **local, offline caching** of plant and pesticide inspections.
 - Used Angular Material for accessibility adherence and responsiveness
 - **Doubled** the number of inspections completed by State inspectors, from **1000 to 2000+**
- **Tech Stack: C#, .Net Core, EF Core, Angular/Material, Docker, Sql Server**

Michigan Department of Health and Human Services (MDHHS) (09/2017 – 10/2019)

- **Full Stack Software Developer**
 - Coordinated directly with payors to build custom file formats when EDI was not an option
 - Incoming roster files would be read by bash scripts
 - Custom header formats developed with payors would be included on roster files
 - Bash scripts would read the headers, execute specific Groovy script based on header
 - Migrated legacy Oracle batch billing jobs to Groovy scripts, **reducing run time from 10-12 hours to 30 minutes**
- **Tech Stack: Java/Spring MVC/Spring Boot, Hibernate, Spock, Groovy, Bash, Oracle/Solaris OS**

LOCHBRIDGE – 07/2016 – 09/2017

Michigan Child Support Enforcement System (MISCES) (07/2016 – 09/2017)

- **Java Consultant**
 - Maintained and optimized **200+ Oracle batch jobs**
 - Upheld **<0.2% error rate in production**, thus learning to actually **appreciate waterfall** SDLC

Steven Prindle

Lansing, MI
steprindle@hotmail.com
Senior Software Engineer

- **Tech Stack: Java, Oracle 11g/12c, Oracle Forms, Spring Tool Suite, IBM Rational Team Concert, SVN**

Delta Dental of Wisconsin – EDI Data Processing (09/2014 – 04/2015)

- **Junior Developer**
 - Maintained proprietary enrollment system to ensure proper parsing of EDI roster files
 - Worked with team lead to troubleshoot erroneous coverage requests
- **Tech Stack: RPG (columnar and freeform), IBM iSeries (AS/400) midrange, iSeries Navigator, SVN**

EDUCATION

Associate of Applied Science
Baker College of Muskegon
